

BOXER PROPERTY

Adit Khalkar

Agenda Roadmap

Key Challenges

01

Onboarding New Buildings

Improve efficiency in integrating new properties into Boxer's operational systems

02

Sourcing Targets

Streamline and standardize how new property opportunities are identified

03

Estimating Management Costs

Automate cost and profit estimates for potential targets

Selected Challenge | Issues & Why It Matters

01 Onboarding New Buildings

Messy Data

New files arrive
disorganized

(Digital, Physical,
and Missing Items)

Highly Manual

Staff must open
every file and enter
appropriate data
into respective
fields by hand

Scalability Issue

It takes 800+ hours
to add just one
building

More buildings =
More people

Safety Risks

Manual work
causes errors

Possibility of
missing critical
items

Current Onboarding Process

Current Onboarding Process | Performance Snapshot

Timeline

>1 month

Per building

Effort Required

800+

Person-hours

Capacity

1

Building at a time

Proposed Onboarding Process | 1 of 2

Future-State Onboarding Journey

Previous manager sends a bundle of documents

Admin drops documents into a shared intake folder

System groups files by property, tenant, document types

Key documents pushed into M-Files, surfaced in Brava

Proposed Onboarding Process | 2 of 2

Future-State Onboarding Journey

System compares “What Boxer needs” vs “what we received” and lists missing items

Missing items automatically create cases for the right teams

Onboarding admin reviews a summary dashboard, resolves gaps, and signs off on the building

Proposed Onboarding Process | Standardized Process for Documents

How it Works

Single entry point: All onboarding docs come through the same intake folder

Smart categorization: Each file is tagged as a lease, COI, permit, warranty, invoice, maintenance record, etc.

Property & tenant mapping: Every document is tied to the correct building, suite, and tenant

Rule Based Routing: Docs go to the right M-Files bucket

Exception handling: Missing > “gap list”, Uncertain > human review

Underlying Technology of Proposed Process

Input Layer

Document Intake

- UiPath Orchestrator monitors incoming files
- Documents enter via shared drive
- Supports digital and scanned PDFs

Staging Layer

Classification

- UiPath Document Understanding Module classifies document with confidence level (0%-100%)

Processing Layer

Extraction & Validation

- Capture key fields using UiPath Studio OCR
- Normalizes data into a structured format
- Human-in-the-Loop (HITL) reviews fields < 90% confidence

Output Layer

Updation & Exception

- Documents posted to M-Files
- M-Files and Brava gets updated
- Auto-case creation for missing details
- Log each step using Orchestrator Logs

Pilot Plan | Where to Start?

Phase 1

Pilot Scope:

- Focus Documents: **Tenant & Lease Documents**
- Pilot Duration: **30 days**
- One Houston property
- E2E implementation from Document intake (Dropbox) to updatation in Brava and M-Files
- Entire process is documented for future training

Guardrail & Resourcing Need:

- Transition Specialist to verify all source documents are correctly ingested
- Secure automation accounts with limited access
- A Property manager assigned to answer business queries during implementation phase

Success Metrics:

- **Faster:** Achieve full transition in <30 days
- **Consistent:** Maintain an external error rate (post-HITL) of below 5%
- **Efficient:** Reduce onboarding time by >**40%**
- **Reliable:** Property Manager notified for case creation

Journey Map | What's Ahead?

Phase 1

- Automate ingestion of **core tenant documents** (Leases, COIs, W-9s)
- Establish the HITL validation station
- Train the initial Transition Specialist (Train the Trainer model) and documentation.
- 1 Houston property

Phase 2

- Integrate the system to process **Maintenance Records, financial and Billing Records.**
- Incorporate other shared drives: Google Drive, One-Drive
- Process refinement and deployment for same property

Phase 3

- **Full enterprise training** for all property managers on the new tools.
- Further enhancements (e.g., Data Analytics, auto-renewals)

Strategic Benefits

Onboarding Process

	Improved Onboarding Consistency and Timelines
	Reduced Labor Requirements
	Standardized Issue Identification and Resolution
	Visibility Into Onboarding Status
	Scalable Onboarding Process

Overall Business

	Accelerates Growth in Third-Party Management
	Strengthens Boxer's Value Proposition and Market Position
	Improves Cost Predictability for New Properties
	Shifts Focus to Higher-Impact Tasks
	Builds a Foundation for Future Capabilities

Key Assumptions | Solution Dependencies

Access to Property Data From Prior Managers

Assume Boxer can obtain key documents and data and has enough incoming properties for testing new process

M-Files & Boxer Central Can Support Integration

Assume Boxer's enterprise platform can support API connections and RPA workflows without disrupting core operations

Documents Can Be Digitized and Parsed

Assumes most incoming documents (digital or scanned) can be processed and are legible enough to be parsed

Standardization Across Properties Is Achievable

Assumes Boxer can define a realistic "required vs optional" data standard despite differences in building type, tenant mix, and geography

Key Risks & Mitigants

01	Variable Document Type and Quality	<u>Mitigation:</u> Human-in-loop review for low-confidence items
02	Date & Document Misclassification	<u>Mitigation:</u> Confidence scoring & manual verification
03	Missing Documents or Data	<u>Mitigation:</u> Automatic case creation & notification to property manager
04	RPA Sensitivity to Interface Changes	<u>Mitigation:</u> small maintenance updates
05	Employee Adoption Challenges	<u>Mitigation:</u> Simple UI, training, and phased rollout support
06	Over Standardization / Unique Properties	<u>Mitigation:</u> Allow approved property-specific exceptions
07	Data Security Requirements	<u>Mitigation:</u> Encryption and access controls

Impact and Future Capabilities

LET'S MAKE ONBOARDING BOXER'S COMPETITIVE WEAPON

Standardized Digital Foundation

Eliminates manual follow-ups and speeds up the process

KPI Metrics

Leadership gets real-time visibility into operational health

Market Positioning

Boxer differentiates in the market as data-driven, operationally excellent

Thank you
